ABSTRACT

Continuous water levels from 36 wells in Missouri were monitored during 1985 and 1986 by the Missouri Department of Natural

Resources, Division of Geology and Land Survey. Daily mean water levels are displayed in tables and also in hydrographs.

INTRODUCTION

Groundwater level monitoring is essential to managing groundwater aquifers. Fluctuations and long-term trends in groundwater levels vary in response to aquifer recharge and discharge. Recharge varies in response to precipitation and surface-water infiltration. Discharge varies in response to natural flow to springs and streams, flow to other aquifers, evapotranspiration, and well withdrawals.

Continuous groundwater levels have been recorded since 1955 by the Missouri Department of Natural Resources, Division of Geology and Land Survey (DGLS). The number and locations of wells represented by the water-level records have varied through the years to the 1986 number of 36. Some data from this network have been published in

regional groundwater studies, but most have never been published.

The purpose of this report is to publish the daily mean 1985 and 1986 groundwater level data. Daily maximum, minimum, and mean water levels as well as hourly water levels will be placed in a computer data base to provide easier access to the data. This report is intended to make water managers aware of the groundwater level network in Missouri and the availability of the data.

This report represents cooperation between DGLS and the U.S. Geological Survey. Data from the groundwater level network can be obtained upon request from the Missouri Department of Natural Resources, Division of Geology and Land Survey, P.O. Box 250, Rolla, Missouri 65401.

GROUNDWATER LEVEL DATA

Continuous water-level data for 1985 through 1986 are presented for 36 wells. Locations of the wells are shown in figure 2. Information about each well is presented alphabetically by county.

Map Number and Well Name

Map numbers designate the well locations in figure 2. Each number consists of a county code and a unique letter. Each well is assigned the name of the nearest town or the name of the owner.

Well-Identification Number

The well-identification number is a 15-digit number used as an internal control in the computer files. Although the number is formed from the latitude and longitude of a point believed to represent the well location, the number is an identifier, not a locator.

Locations

Three types of locations are given. The first is in accordance with the General Land Office survey coordinate system (fig. 1). The township,

range, and section are followed by letters indicating quarter section, quarter-quarter section, and quarter-quarter-quarter section. Subdivisions of a section are designated letters a, b, c, and d, in counterclockwise order, starting in the northeast quarter. The second location type is latitude and longitude. The third is a written description of the well location.

Owner

The owner of the well is listed.

Formations Open to the Well

Geologic formations open to the well are listed. The generalized stratigraphic column for Missouri is shown in table 1, which is modified from Koenig (1961).

Well Characteristics

In each case, well characteristics of interest are the date of drilling, total depth, and casing information. If DGLS has a stratigraphic log of the well, the log number is listed.

Instrumentation

The most common type of well installation, a Stevens model A-35 strip-chart recorder, records water levels as continuous lines on a 10-inch-wide paper chart. The other type of installation, a Stevens model 7001 digital recorder, punches coded water levels on a paper tape at a specific time interval.

Datum

The land surface datum and the relation between the measuring point and the datum are listed.

Period of Processed Record

The period of processed record where daily maximum, minimum, and mean water levels are available also is the period for which unit values are available. Missing parts of the 1985 and 1986 period are explained.

Remarks

Other pertinent information about wells are noted here: for example, wells that yield saline water.

COUNTY--Clark

WELL IDENTIFICATION NUMBER--402356091344001

LOCATION--T.65N., R.6W., 29cad, lat, 40°23'56", long 91°34'40", north edge of Wayland, County
 Highway B.
 Owner: Citys of Kahoka and Wayland

FORMATIONS OPEN TO THE WELL--Alluvium and undifferentiated Pleistocene glacial drift.

WELL CHARACTERISTICS--Drilled on October 1, 1974, total depth 160 feet, casing depth unknown.

INSTRUMENTATION--Stevens model A-35 chart recorder, installed October 8, 1974.

DATUM--Elevation of land-surface datum is 540 feet, from topographic map.

Measuring point: Base of recorder platform, 3.0 feet above land-surface datum.

PERIOD OF PROCESSED RECORD--December 4, 1984, to present.

Missing record for 1985: Recorder clock stopped for the period October 2 to 12.

Missing record for 1986: Recorder malfunctioned for the period November 29 to December 1.

REMARKS--Well may be completed in a former channel of the Des Moines River.

WELL IDENTIFICATION NUMBER--390207092570801

LOCATION--T.49N., R.19W., 12bloc, lat. 39°02'07", long. 92°57'08", 2.5 miles south of Arrow Rock, State Highway 41.
Owner: Richard Durham

FORMATION OPEN TO THE WELL--Burlington Limestone, Sedalia Formation, and Chouteau Group.

WELL CHARACTERISTICS--Total depth 230 feet.

INSTRUMENTATION--Stevens model A-35 chart recorder, installed March 29, 1962.

DATUM--Elevation of land-surface datum is 700 feet, from topographic map.
Measuring point: Base of platform recorder, 1.3 feet above land-surface datum.

PERIOD OF PROCESSED RECORD--January 15, 1980, to present.

Missing record for 1985: Recorder clock malfunctioned for the period March 20 to December 31.

Missing record for 1986: Recorder clock malfunctioned for the period January 1 to March 4; record not available after March 4.

REMARKS--Yields saline water, appears to be an obstruction at 58.9 feet.
